A unique curtainwall system designed by *EXTECH*[®]/Exterior Technologies, Inc was recently installed on an airplane hangar in New York at an unusually low cost. Airport hangars are subject to massive amounts of abuse. Doors are opened and closed often. Engines and propellers can throw debris. All of these can cause problems over time.

EXTECH was able to offer a curtainwall with visibility in some sections and diffused light in others, as well as impact resistance and ultra-violet protection. EXTECH installed this system at a low cost in the range of \$28 per sq. ft.!

The new system accepts both glass and cellular polycarbonate glazing (in the same system!). This allows the use of glass where visibility is desired, with other portions of the wall being done in PCSS (Polycarbonate Structured Sheet). PCSS insulates better than glass, is a natural UV barrier, and gives diffused light. Further, it does not require cleaning as glass does and it is extremely resistant to abuse.

The #3000 System incorporates the exclusive features for which *EXTECH*[®] is famous...deep glazing pockets, low friction gasketing, controlled gasket pressure, and overlapping aluminum framing members.
