

THINK OUTSIDE THE STEEL BOX

THINK NATURAL DAYLIGHT & VENTILATION
THINK... EXTECH/EXTERIOR TECHNOLOGIES INC.

Realize the benefits of massive natural lighting and ventilation produced by EXTECH's continuous Top-Hinged Windows & Skylights. See for yourself...glazing options are glass, fiberglass and high strength, impact resistant polycarbonate. Consider the benefits of EXTECH's low friction gaskets and deep glazing channels. They reduce noise and allow for maximum thermal movement of the glazing. Understand the virtues of designing a "Green" building. These include lower energy bills, low maintenance, healthier employees and increased productivity. EXTECH also produces a curtainwall system unlike any other, in that it's designed specifically for use with polycarbonate...yet it works with glass glazing too! One of our patented skylight systems forms the ridge of a metal building and is designed to accept the thermal expansion of the adjoining standing seam roof sheets. Your thoughts & creativity become a reality with exterior technologies...from EXTECH.
