

~PRESS RELEASE~

SERIES 3100 BDL STANDING SEAM SKYLIGHT SYSTEM

A new product is now offered by EXTECH/Exterior Technologies Inc. in their Series #3100 BDL standing seam skylight and wall system. The same technology that makes standing seam roofing watertight is present in this high-performance standing seam skylight, (or wall) with the added advantage of diffused, natural light transmission.

Panels are nominally 2' wide and are available in lengths to 39'. Continuous polycarbonate battens snap over the panel edges to form the seams. The BDL panels are attached to the structural supports of the building by concealed stainless steel clips. The EXTECH BDL system is unique in that our clip system (patent pending) allows the stainless steel clip to slide within a secondary clip channel. Further, the clip compensates for misalignment of purlins. With the BDL system there are no exposed fasteners.

Aluminum framing is available in all finishes and will remain attractive for years to come. Further, this system features all of the unique EXTECH advantages including deep rabbets and low friction gasketing. This allows for thermal movement of the polycarbonate sheets and reduces noise.

1. The same technology that makes standing seam roofing watertight is present in the BDL system, with the added advantage of light transmission.
2. Glazing material is available in clear, bronze, opal and green.
3. Insulation values are in the same range as 1" insulated glass. Superior values are obtained with double glazed systems.
4. The BDL panels are attached to the structural supports of the building by concealed stainless steel clips.
5. The EXTECH BDL system is unique in that our clip system (patent pending) allows the stainless steel clip to slide within a secondary clip channel. Further, the clip compensates for misalignment of purlins and other factors.
6. There are no exposed fasteners. Perimeter aluminum framing, available in all finishes, is thermally broken.
7. All aluminum framing which captures the BDL polycarbonate panels is fitted with low-friction gasketing.
8. Several enhanced systems are available, including double glazed systems.

To learn more about this and other enhancements, including double glazed systems, visit our website or give us a call. The Series 3100 BDL...BDL is Bright Day Lighting.
